

MailCenter

The Software for SAP Business Processes
via email

04/2018

Digital, economical and practical business mail

Product Description

The **MailCenter for SAP** is an email management platform which makes business processes more efficient and economical. SAP business documents can be shipped easily, quickly and flexibly via email from the SAP ERP system to business partners. Thus, the add-on serves as an important building block within the framework of a company-wide enterprise content management strategy.

The solution provides comprehensive functions for receiver determination, mail processing and master data maintenance directly in the SAP backend. The easy operation and flexible adaptation to the respective business process enables efficient workflow management. The central user interface, message description and reporting ensure a high level of transparency. The MailCenter does not require its own hardware.

The MailCenter makes correspondence from SAP ERP more efficient and is proven to cut costs, resources and time.

Feature Overview

Recipient and Sender

- Automatic receiver determination
- Individual receiver
