

MailCenter PlatForm

Digital communication
for SAP ECC and S/4HANA

Communication digital, inexpensive
and practical.

SAP® Certified
Integration with SAP S/4HANA®

MailCenter – the platform for digital communication in SAP

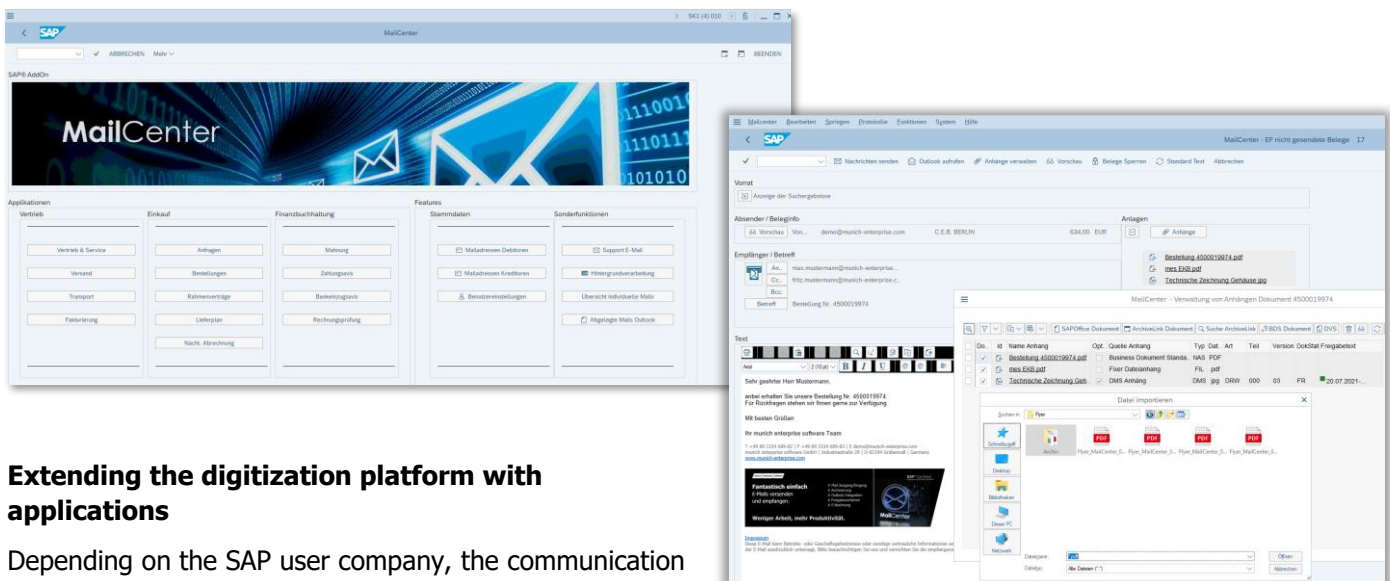

Product

Digitalization has become one of the strongest drivers of economic activity. Numerous previously manual processes can now be automated thanks to digitization and electronic processes. This also applies to communication in and with SAP.

Previously, messages were sent manually from the ERP system. With the "MailCenter", the SAP-certified platform from munich enterprise software, companies are taking their digital communication in SAP to a new level: Whether normal email traffic or the transfer of e-invoices (including their creation), workflow-based approval procedures or mobile apps/Fiori and SMS – the MailCenter automates communication across SAP.

The platform started more than ten years ago with the aim of realizing optimal email communication from and with SAP. The MailCenter therefore extends the ERP system with mail and workflow functions. Orders, orders, delivery notes and invoices are managed, processed and shipped as electronic documents. From all departments: sales, purchasing, logistics, service, messages, accounting, marketing...

Over time, the platform has been constantly expanded with new technologies and today masters much more than just email traffic. More than 100 companies are already using it to design all digital communication workflow-based from SAP. The MailCenter does not require its own hardware. The intuitive software makes correspondence with SAP ERP more efficient and demonstrably leads to cost, resource and time savings.

Extending the digitization platform with applications

Depending on the SAP user company, the communication requirements are sometimes very different.

Therefore, the digitization platform of business processes can be adapted. The goal is to make transaction processing as efficient as possible. The simple operation of the MailCenter, its central user interface, news documentation and reporting make it possible and ensure a high level of transparency.

The basis for this is always the proven MailCenter for the administration, processing and dispatch of electronic documents. Around them are structured applications that can be added as required.

Highlights

100% Mail features

Approval procedure

Central cockpit

E-invoices

Mobile apps, archiving...

Reporting

Outlook Integration

Comprehensive Customizing

Intuitive operation

Uses

Email

Fantastically easy to send and receive emails. Manage, edit and send electronic documents for sales, purchasing, logistics, service, reporting, accounting and marketing. Less work, more productivity. This software works wonders.

Outlook Integration

Store incoming emails from Outlook for business transactions in SAP or send emails from SAP via Outlook integration. For maximum flexibility and transparency of email communication.

Archiving

Emails secure via archive Archive link. This application relieves the database and emails are stored permanently via the ArchivLink interface.

Stamp

Automatically print important information on documents. Whether drawing header or inventory note, with the stamp application documents are stamped before dispatch.

Monitor

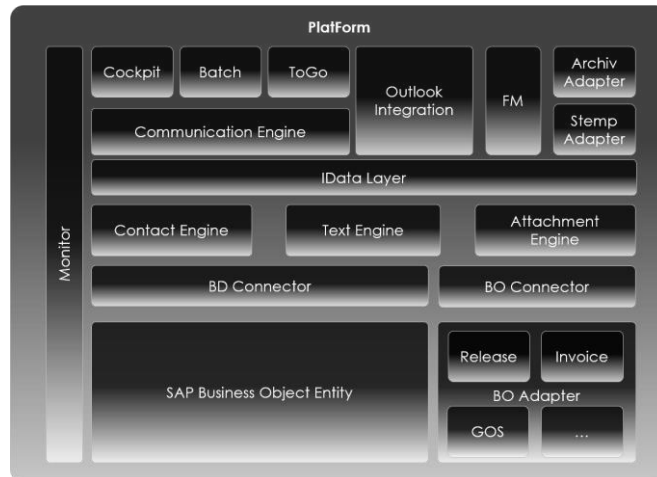

This application takes over the permanent and automated monitoring of the SAP applications. It accelerates and improves the monitoring and correction of digital SAP processes.

E-invoice

Electronic invoicing made easy. Application for XRechnung, ZUGFeRD and PEPPOL, fully integrated into SAP. Create and send e-invoices directly in SAP. The flexible framework allows the implementation of further standards.

Approval procedure

Innovative, digital approval workflows. Approvals for sales and purchasing via SAP UI, mail or mobile App. Simple digitization of paper-based release procedures. Accelerate so easily your processes.

SMS

Improve customer loyalty and customer satisfaction with SMS. Send short messages directly from SAP. Seamlessly integrated into the SAP ECC and S/4 environment. No additional hardware and software components necessary.

Other applications

With other applications such as invoice control, order confirmations and much more, the efficiency of digital processes is significantly increased. For less work and higher productivity.

100+ installations worldwide

provides software for **500+** companies

in about **30** Countries

above **20 Mio** mails sent per year

Industries

- ✓ Metal, wood, paper industry
- ✓ Automobile industry
- ✓ Machine, equipment and component construction
- ✓ Plastics industry
- ✓ Consumer goods
- ✓ and more

Technology

- ✓ Starting with Netweaver 7.0
- ✓ ECC 6.0 to S/4 HANA
- ✓ Smartform, SAPscript, Adobe
- ✓ Comprehensive Implementation Guide
- ✓ Short, standardized implementation
- ✓ Easy takeover by IT

Benefit

... for the company

- Secure and efficient digital business processes through a unified platform
- Short payback period of the solution and permanent cost reduction

... for the users

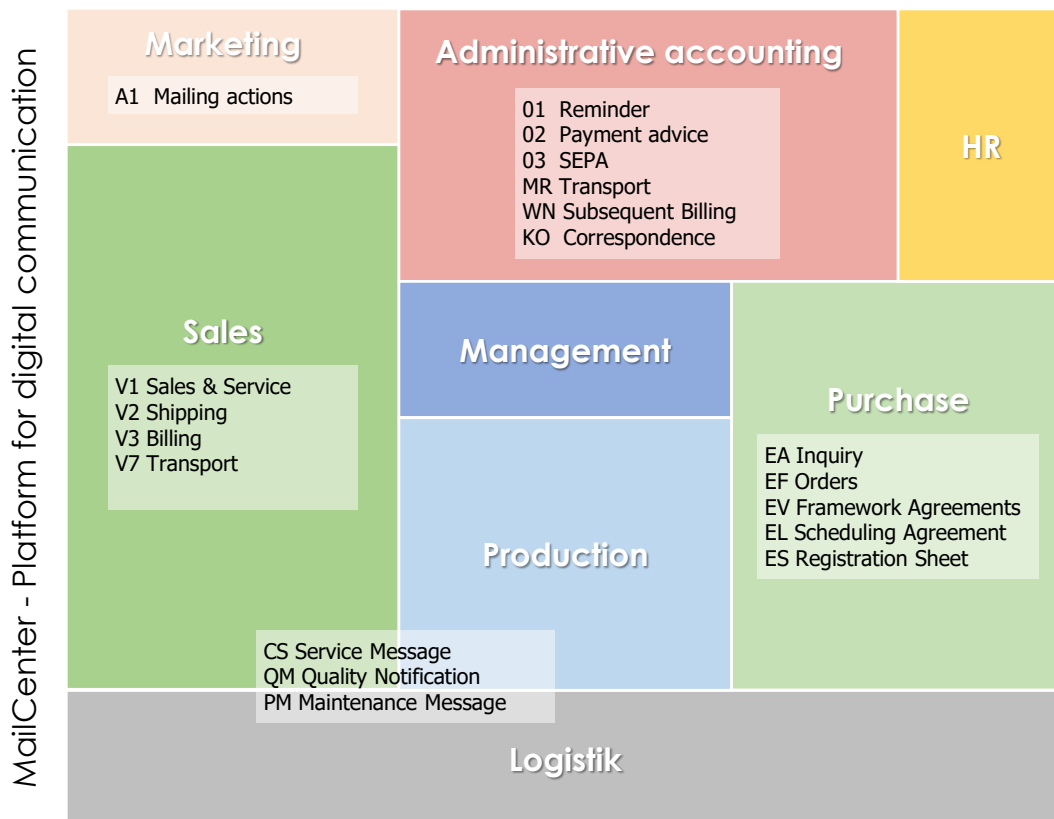

- Short communication channels internally and externally
- Increased transparency and reduced search times
- Intuitive operation

... for the IT

- Standard solution that can be optimally configured to meet a wide variety of needs.
- Easy implementation and short implementation time

Solution Scope

The MailCenter is offered as a standard solution and is available in German and English. In addition to the provision of the software, we take over the initial setup on the basis of a predefined questionnaire. The platform supports the following business areas:

Requirements:

EHP2 FOR SAP ERP 6.0

SAP NETWEAVER 7.0 (SAP EHP 2 for SAP NetWeaver 7.0)

Also for SAP S/4HANA - from SAP S/4HANA ON-PREMISE 1511
