The connection between Outlook and SAP

Fast and easy digital business processes with the
MailCenter Outlook integration.

SAP® Certified
Integration with SAP S/4HANA®

MailCenter **Outlook Integration** – Successful by connecting Outlook to SAP

Product description

The MailCenter Outlook Integration connects Microsoft Outlook with the SAP system. It makes important SAP data and functions available directly in Outlook. The rapid availability of information leads to improved external and internal communication. Search times are reduced, processes accelerated and service quality increased.

Display master, transaction and contact data for the SAP business partner in Outlook – Based on the email information, the corresponding business partner from SAP is automatically determined. You get an overview of the last processes for this business partner and his contact person immediately and without further clicks directly in Outlook. If necessary, you can jump directly from Outlook to the SAP process. It couldn't be easier.

Create, change, and display SAP transactions directly from Outlook – You can create, change, or display SAP transactions directly from the Inbox. If you create or change a transaction, the email can be automatically archived for the transaction. Using personally definable favorites, you can jump directly from Outlook to the corresponding transactions in the SAP system. This saves your employees numerous individual steps and thus valuable time.

Central storage of all important emails and attachments - By storing emails and email attachments to SAP documents such as quotations, orders and purchase orders, you create seamless, transparent communication. This provides you with a clear history of any SAP object.

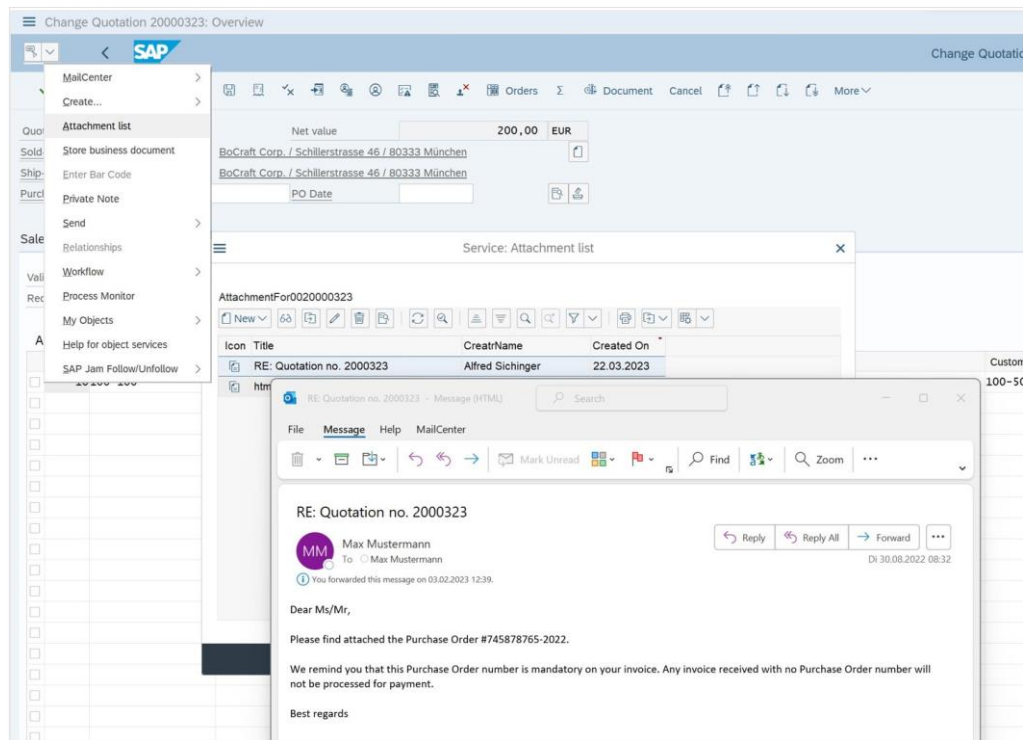

highlights

- ✓ Display master, transaction and contact data for the SAP business partner in Outlook
- ✓ Creating, changing, and displaying SAP transactions from Outlook
- ✓ Direct jump from Outlook to your most important SAP transactions
- ✓ Central storage of all important e-mails and attachments – directly in SAP
