

MailCenter Invoice Pro

The SAP solution for sending e-invoices.

Fantastically easy with the MailCenter

SAP Certified
Integration with RISE with SAP S/4HANA Cloud

With the MailCenter, you can make your company fit for the digital future – transparent, paperless and sustainable

SAP e-invoicing – legally compliant and efficient directly from SAP

Time is running out: e-invoicing is coming – are you ready?

The countdown is on – From January 1, 2027, electronic invoicing will become an unavoidable obligation for all B2B companies in Germany. Companies that do not act now risk not only legal consequences, but above all a chaotic and expensive final spurt.

Challenge

In Germany, public administration (B2G) is already obliged to receive electronic invoices in the XRechnung format. At the same time, suppliers are obliged to submit their invoices in this format. In addition, companies must be able to receive and process e-invoices electronically.

From 2027, electronic shipping in the B2B sector will also become mandatory – gradually and depending on the size of the company. These requirements are based on the EU Directive 2014/55/EU and the EN 16931 standard, which means that paper-based processes lose their legal and economic relevance.

Our solution

With our add-on, you can already meet the requirements of the upcoming e-invoicing obligation today. Create and send e-invoices directly from your SAP system, in compliance with the law and future-proof. The formats XRechnung and ZUGFeRD are supported.

Our offer

- **Seamless digitization and automation** of the entire invoicing process in SAP
- **Direct creation and dispatch** of e-invoices in accordance with EN 16931
- **Central solution in the SAP system** – without media discontinuities, without additional systems
- **Ready for use for B2B and B2G** – ideal for the upcoming e-invoicing obligation
- **100% user-oriented** – intuitive to use and quick to implement
- **Short project durations** thanks to standard solution: modification-free & release-ready

Recommended by SAP customers

★★★★★ „In this way, we are also fulfilling a wish of many customers who want a format that can be processed automatically. They want to read the data directly into their systems. This is only possible to a limited extent with normal PDF files, as the data always has to be typed manually from there.”
